

CHANGE NOTICE

Effective Date: DECEMBER 20, 2011
Log Number: CN-11-436
Subject: VALVE MARKING PN (03604.00 Complete Valve), (03604.21 Diaphragm)
Model Affected: L-1X, L-1X16, GL-X & EST-SINGLE RACK

CMA, with the help of DEMA, will be upgrading the water valve diaphragms to “Viton” material, which replaces the common material “EPDM”. The “Viton” material has a higher temperature and pressure rating. We believe this change in material will provide a more reliable and durable water valve, which can be subjected to harsh conditions that are common in dishmachine environments.

All DEMA valves with “Viton” diaphragms will be identified with a letter “V” engraved in the body of the valve. This new spare part, “Viton” diaphragm, is available and is completely interchangeable with valves having the “EPDM” diaphragm! The DEMA valve body is made from 304 Stainless Steel and is much more compatible with the various water conditions we face in the warewashing industry.

NOTE: Will handle temperatures in excess of 400°F and pressures of 125psi.
