

# CMA's SPECIAL L-1C UNDERCOUNTER GLASSWASHER

## New Features on the L-1C Chemical Sanitizing Glasswasher, Providing "Noise Suppression Technology" for Special Applications

At our customer's request, CMA has developed applications and programmed the L-1C to function as its sister machines, Models L-1X and L-1X16 while providing Noise Suppression recognition. This change improves the Cycle Time to 2M, **which will now produce 30 racks/hr (from 20 racks/hr).** Our new L-1C is very quiet behind the bar built with unique features to reduce noise. The double-wall construction and "Noise Suppression Technology" (NST) on our Newly designed Wash Pump Motor makes this Model the perfect choice for behind-the-bar applications and all other front-of-the-house applications requiring noise reduction. The wash pump has a stainless steel closed impeller that suppresses the noise and provides high-end sanitizing of glassware, which other glasswashers do not offer. The L-1C comes equipped with the CMA-installed band heater for added hot water assurance.

### NOTE:

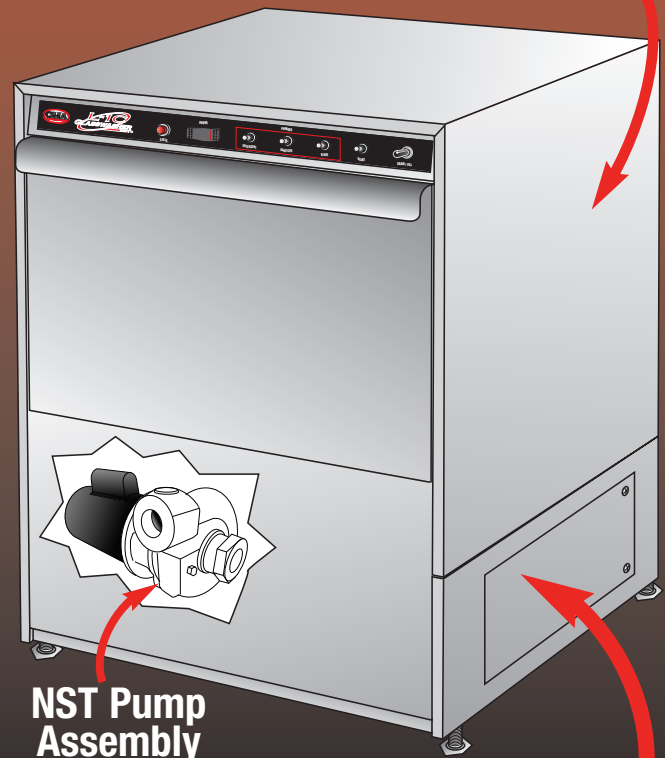

SALES CONTINUE TO ROCKET UPWARD AS THE NEW CMA-FEATURED L-1C. DEMONSTRATES SIGNIFICANT NOISE REDUCTION, AND CONTINUES TO PLEASE AND SATISFY OUR CUSTOMERS.
